**Ключевые слова:** дерматит, аллергический дерматит, желудочно-кишечная дисфункция, пребиотик.

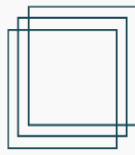

### **Annotatsiya**

Ushbu maqolamizda yangi tug'ilgan chaqaloqlarda uchraydigan dermatit, oshqozon-ichak disfunktsiyasi, hamda ularning davolash usullari D vitaminining ushbu kasalliklarni davolashda tutgan o'rnini haqida qisqacha fikr yuritib o'tganmiz.

**Kalit so'zlar:** Dermatitis, allergik dermatit, oshqozon-ichak disfunktsiyasi, prebiyotik.

### **INTRODUCTION**

Pediatricians of life the first in the year of babies diseases diagnosis the most they call it difficult. This is a baby fast grow up going and different to diseases face coming possible has been time First ten two of the child's body in the month development one series properties have, therefore for parents new born in babies main of diseases signs as well as them prevention get and of treatment possible has been methods they know important

### **Dermatitis:**

Each baby healthy skin with is born However , his thin skin still external to the world very sensitive That's why for dermatitis most of the time new born in babies and of life the first in the year in babies occurs .

Dermatitis is itching , dryness or on the contrary , crying erosion with together coming skin of places redness .

Dermatitis son to the children than in girls more occurs . new born in babies this of the disease the most a lot occurring type , they hard clothes because of of the child to the body very hard pressed or to himself special commodity diapers baby for suitable not coming can

Allergic dermatitis is of the baby some the environment factors allergy because of surface coming allergic skin rash . In this case , the first in line , you allergies no to do need , then while symptoms with your engagement need If scratching feature giver food if , then the baby to diet to put need will be

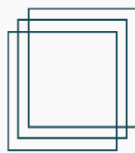

Atopic dermatitis is genetics , to be exact filaggrin of the gene from mutation come coming out disease That is , the patient skin relaxes and of this as a result of allergens and of microbes easily to pass possibility also provides moisture quickly loses and dries up , and in babies sebaceous glands yet complete not working because of , in them atopic dermatitis signs especially very fast it seems

His signs as follows in appearances will be most of the time redness and eczema face , neck , chest , elbow and on the knee appear will be Allergic from dermatitis different like , atopic dermatitis usually does not require a diet . But this on the ground only doctor diagnosis to put possible not to forget need and he is right treatment also determines the course .

### **Gastrointestinal dysfunction :**

of life the first in the year in children again one wide spread out disease food digestion to do system is a violation . It's in babies gastrointestinal tract tract system immaturity with depend Food digestion to do bodies dysfunction common anxiety , constipation or on the contrary , diarrhea with is expressed . Food digestion to do system violation baby for food of substances lack of it take coming it is possible while early year old of development delay and of immunity to decrease take will come . Such in the situation you of the disease to pass road you put or " old method to " methods". appeal to do possible not from an expert help to ask it is good

Gastrointestinal of diseases prevention get if the baby mixed or artificial in feeding if so , that's right the formula choose through reach can So as a leader pediatricians a goat to the milk based on the formula to choose recommendation because they do his composition of a woman mother to the milk the most near That 's it means that he is a child body by easier is absorbed and his still weak food digestion to do does not burden the organs .

Goat to the milk based on unique composition addition respectively special fat and vitamin -mineral complexes with enriched . From this in addition , omega fatty acids , GOS and FOS prebiotics in the mixture efficient combination , as well as Bifidobacterium BB -12 ( probiotics ) live bifidobacterium there is . This is milk cocktail to the baby not only enough in quantity , perhaps right development and strong immunity for all necessary food substances to get help will give .

### **How and with what to treat a newborn baby?**

New born babies and one under the age of has been of children many diseases , right treatment with , in the future of the child common to the situation never how effect does not show . But parents only pediatrician by the disease identify and treat order possible not to forget need Because each baby is individual and healer to the doctor good known has been to himself special development features have Clearly diagnosis and individually selected medicines , from them use of the child minimal negative to the body effect shows .

For example : vitamin D a person to the organism calcium and of phosphorus better absorption for need In children his lack of different of diseases development take coming possible : rickets , bone pathologies and others of vitamin D the most important source the sun is the light However , children for long term the sun sunset recommendation is not possible , therefore vitamin D for with watery or oily solution his lack of the most good prevention get is considered American Pediatrics Academy to babies of life the first days vitamin D from to give recommendation will do , baby breast milk with Is it fed? or with a formula Is it fed ? Nutrition type addition feeding shape determines If the baby only mother milk consumption if he does , then to him vitamin liquid without to give possible , but if it is mixed or artificial in feeding if it is , vitamin D to it with enriched the formula to give enough
